AERTEC Solutions provided consultancy services during the ICAO certification process for Palma de Mallorca Airport. This airport handled almost 23 million passengers in 2013. The services provided by AERTEC Solutions were as follows:

- Compilation all the information and data (mainly graphics) related to the compliance and non-compliance to ICAO standards and recommendations. This was achieved by carrying out a complete on-site study to verify all information gathered.
- Development of the airport manual as the reference document during the certification process.
- Development of any necessary aeronautical studies to justify the non-compliance of several Spanish law clauses outlined in the “Real Decreto 862/2009” (national transposition of the ICAO Annex 14).
- Drafting of necessary documentation to be submitted to the Spanish Aviation Safety Agency.

The process was undertaken in collaboration with all the departments of Palma de Mallorca Airport, AENA and AESA (Spanish Aviation Safety Agency).
