The project framed within the CENIT R & D is a collaborative project with companies of national and international character of the size of Boeing Research & Technology Europe, INDRA or AMPER and research groups as AICIA (Association for Research and Industrial Cooperation of Andalusia).

- The project is focused on developing technologies that enable the future creation of components and advanced flight platforms applicable to new air surveillance systems, characterized by a minimal environmental impact.
- AERTEC Solutions works on tasks related to efficient methods of launch and recovery, investigating the technologies required to perform automatic and autonomous takeoff and landing, and developing robust and stable control system for UAVs.
