

Consultancy

Audit of technical installations & maintenance policy of aeronautical safety equipment across the **moroccan airport network**

ONDA (Office National Des Aéroports) / **Feasibility studies (2011-2013)**

This audit was carried out at 26 moroccan airports managed by the Moroccan Airports Authority across over 1,500 km.

The audit was mainly focused on three distinct fields:

- NavAids
- Airfield Ground Lighting (AGL)
- Fire fighting and rescue system and equipment

The project was carried out in three stages:

- Stage 1: Data collection, carried out during on site visits to each one of the 26 airports within the scope.
- Stage 2: Diagnostic, processing the collected information and providing a comprehensive report on the state of the systems and infrastructure.
- Stage 3: Full audit report including the previous two stages plus a full section dedicated to the suggestion of improvements to the current maintenance procedures at each airport.
