Lleida-Alguaire Airport is one of the few public airports in Spain not operated by AENA. AERTEC Solutions was the leader consultant of the preparation of business cases and the design project of the control tower.

After that, the client appointed us to provide the technical documents for the legalization of the airport. Under our scope was the Airport Manual, its procedures, the SMS Manual and procedures and the Emergency Plan.

Following those two contracts we were finally awarded the leadership of the operational readiness and airport transfer process, in which operations and safety training was provided to all the airport staff including management team. We planned, conducted and took full responsibility of the terminal building, apron runway and taxiways trials in order to obtain the airport certification by the Spanish Civil Aviation Directorate, which was accomplished in a record time.
