# Application of Leading Technologies for Unmanned Aircraft for the Research and Development of ATM

Robust systems in extreme conditions > **RPA's (2007 - Present)**

- AERTEC Solutions is part of the ATLANTIDA consortium (Application of Leading Technologies for Unmanned Aircraft for the Research and Development of ATM)
- It is a project focused on the development of technologies that make possible the necessary changes to the current perspective of air traffic management, characterised by a low level of automation, based fundamentally on tactical decisions made by humans
- The project is one of the CENIT projects, a collaboration project with both national and international companies, such as BOEING or AERNNOVA and with research groups such as the AICIA (Association for Research and Industrial Cooperation of Andalusia)
