AENA Aeropuertos / **Airfields: Design and processing of heliports and helipads (2012)**

As part of Malaga Airport's certification process, consultancy work was carried out to adapt commercial helicopter operations at the airport to the regulations and procedures laid down for them.

Mandatory technical regulations (Order FOM 2086/2011) were reviewed and documents justifying compliance with such regulations were compiled during the contract's fulfilment.

Likewise, any changes that needed to be implemented in order to adapt the reserved helicopter parking area to regulations were designed and the ground and air taxiing procedures were drafted.

Lastly, AERTEC Solutions led the necessary risk management work prior to the facility's entry into operation.
