

## Test Systems

# Systems Engineering for the A400M FAL

On-board system testing > Aviation system engineering (2003 - Present)

- Engineering services to define and develop the different test systems that will be used on the factory floor of the assembly of the A400M aircraft
- The engineering encompasses everything from the definition of the operational testing of the specific elements to the construction of systems and test benches that carry out the evaluations
- The most relevant aircraft systems are the following ones:
  - Avionics
  - Powerplant
  - Landing gear
  - Flight control systems
