

μASM A-Fox

Micro-missile

Guidance, navigation and control

A completely modular system consisting in a semi-active laser guidance kit that can be integrated in diverse aerial vehicles. Different applications only require a few small adjustments in the embedded software.

μASM A-Fox

Guidance kit for reconverting unguided missiles

- Guidance kit suitable for conventional unguided missiles. It can be easily installed and the weapon can be operated from its conventional launcher with small adjustments
- INS-based intermediate navigation, which notably increases ballistic range

μASM A-Fox / Light aerial platform micro-missile

- In-house development of all missile systems
- In-house development of the high-performance missile engine
- Especially designed for use on light unmanned platforms
- Currently in the process of integration into our RPAS *TARSIS 75* & *TARSIS 25*
