→ Planning & Production Control and Coverage

Continuous improvement

Aircraft industrial cycle

All the adjustments needed concerning the duration and order of tasks and the resources assigned to them are adjusted through the production and coverage control plan (PCP). New tasks may be added to adapt the process to real production needs, which always takes in account the availability of resources, materials and tools, along with adjustments and unforeseen circumstances. Outstanding work (OW) of both partners and preceding stations are supervised and controlled.

Highly-experienced consultants with thorough knowledge about tools, coverage methods, production planning and control are ready to provide assistance to production activities.

Production coverage, planning and control activities lead to time, cost and quality benefits. All the above is based on continuous improvement, IT tools, know-how and synergies with other programmes.

PLANNING & PRODUCTION CONTROL AND COVERAGE > ACTIVITIES

- ▶ Planning and production control
- ▶ Master plan (FAL)
- ▶ Unified plan (UP) updating
- ▶ Operating plans
- ▶ Process standardisation
- ▶ Analysis, preparation and updating of monitoring reports
- ▶ Assistance to production
- ▶ Industrial meeting management and minutes reports
- ▶ Ensuring the materials supply chain (FAL)
- ▶ Setting delivery dates for materials
- ▶ Missing parts management at stations
- ▶ Work order life cycle management
- ▶ Continuous improvement

Activities lead to time, cost and quality benefits

We supervise production processes to ensure they fulfil the original planning

Tailor-made services

PCP experts

Ready to lead and manage

AERTEC has an extensive workforce of highly-qualified engineers with experience in the aeronautical industry. They are trained and certified in the following key concepts:

- Knowledge about Airbus TLB and SAP SP1 system tools
- Professional project management (PMP)®
- Lean manufacturing

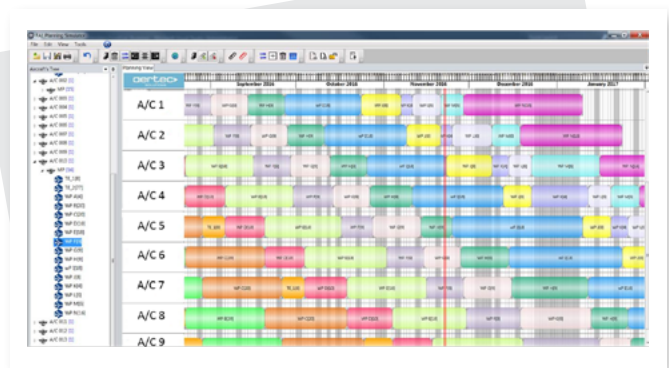

Any specific training needs in terms of either methods or tools will be analysed with the project manager or person in charge of the service.

Preferred strategic supplier for Airbus

Manufacturing engineering services (ME3S)

> Manufacturing

Let's talk aeronautics

Our projects speak for us

A400M

- Integrated manufacturing engineering services at final assembly lines (FAL)
- Planning and production control of operations at flight test centres (FTC)
- Coverage, planning and control management and production control of operations (FAL)
- Components and planning management and production control of operations at the FAL's electrical components repair workshop (REC)
- Industrial coordination support services at FTCs
- Industrial services at FTCs
- PMO Services

Other programmes

- Light & Medium EDV (Version Development Team) production and planning
- Airbus Defence and Space (AD&S) standard operating instructions (SOIs)
- A330MRTT conversion production and planning control
