

Industrial Engineering

Concept design, development and implementation of the A400M FAL external logistics & operations in the **A400M programme** external logistics centre

EADS CASA Consultancy (2005)

The main tasks performed in this project were:

- Workflows and logistics process analysis, to achieve correct operation.
- Definition of IT requirements between ELC-FAL-suppliers, establishing the basis to integrate the ELC into the management of the supply chain of the A400M programme.
- Development of functional specifications for the infrastructures and logistics resources, along with the selection criteria of the logistics operator.
