AERTEC Solutions have been in charge to elaborate this project in order to adapt the RWY 08-26 at South Tenerife's Airport to the ICAO standards.

First of all, AERTEC Solutions made an in-depth analysis on the airfield to define the non-compliance elements. Afterwards a single solution to each case was incorporated to the project so as to ensure that the RWY 08-26 was completely in compliance with the ICAO normative.

Finally, the works had to be undertaken and of course included in the project are summarised as follows:

- Reparation of the service roads around the RWY 08-26
- Rehabilitation and expansion of the RESAs
- Adaptation to ICAO SARPS of all electrical pits
- Rehabilitation of the graded RWY strip
- Execution of a new electrical duct banks section
- Refurbishment of the existing ancillary structures of the approach lighting system
