The Andalusian Emergency Services (EPES) are fully immersed in the process of building a series of heliports to deal with health emergencies throughout Andalusia.

The aeronautical designs for the Aroche and Cumbres Mayores heliports (already built) were drawn up, as were the designs for the heliports at Calañas and the Juan Ramón Jiménez Hospital in Huelva. In order to do so, wind and obstacle studies were conducted and possible trajectories were identified in order to determine the best location for these facilities on available plots.
